

News Release

(HOLDREGE, Neb.) - The Central Nebraska Public Power and Irrigation District's maintenance period on the hydroplant at Jeffrey Reservoir has been extended an extra week. The lake level will continue to fluctuate until work is complete by approximately February 8.

During this time, it will be unsafe to use the lake for any type of recreational activities or shoreline maintenance because the water levels will be constantly changing.

Water levels at other lakes will not be affected by this drawdown. The fluctuating levels will not allow time for cabin-owners to do shoreline work.
